

THE CARE & MAINTAINENCE OF PVD COATED ALUMINUM WHEELS

PVD coated aluminum wheels are not the same as chrome plated wheels, but like chrome plated wheels require special care. PVD (Particle Vapor Deposition) coated wheels are much like the painted finish on your vehicle.

Vogue Tyre recommends the use of mild dish soap and water with a soft sponge for cleaning on a regular basis. Dry with a soft cloth. Never spray cold water on extremely hot wheels. Always allow wheels to cool before cleaning. Do not use abrasive cleaners, acid based chrome or wire wheel cleaners, steel wool or bristly brushes on the finish. If a scratch does appear, we suggest using *Meguiar's Scratch X 2.0* for removing mild scratches.
